The Campus Presence Pendulum

Mars 2020

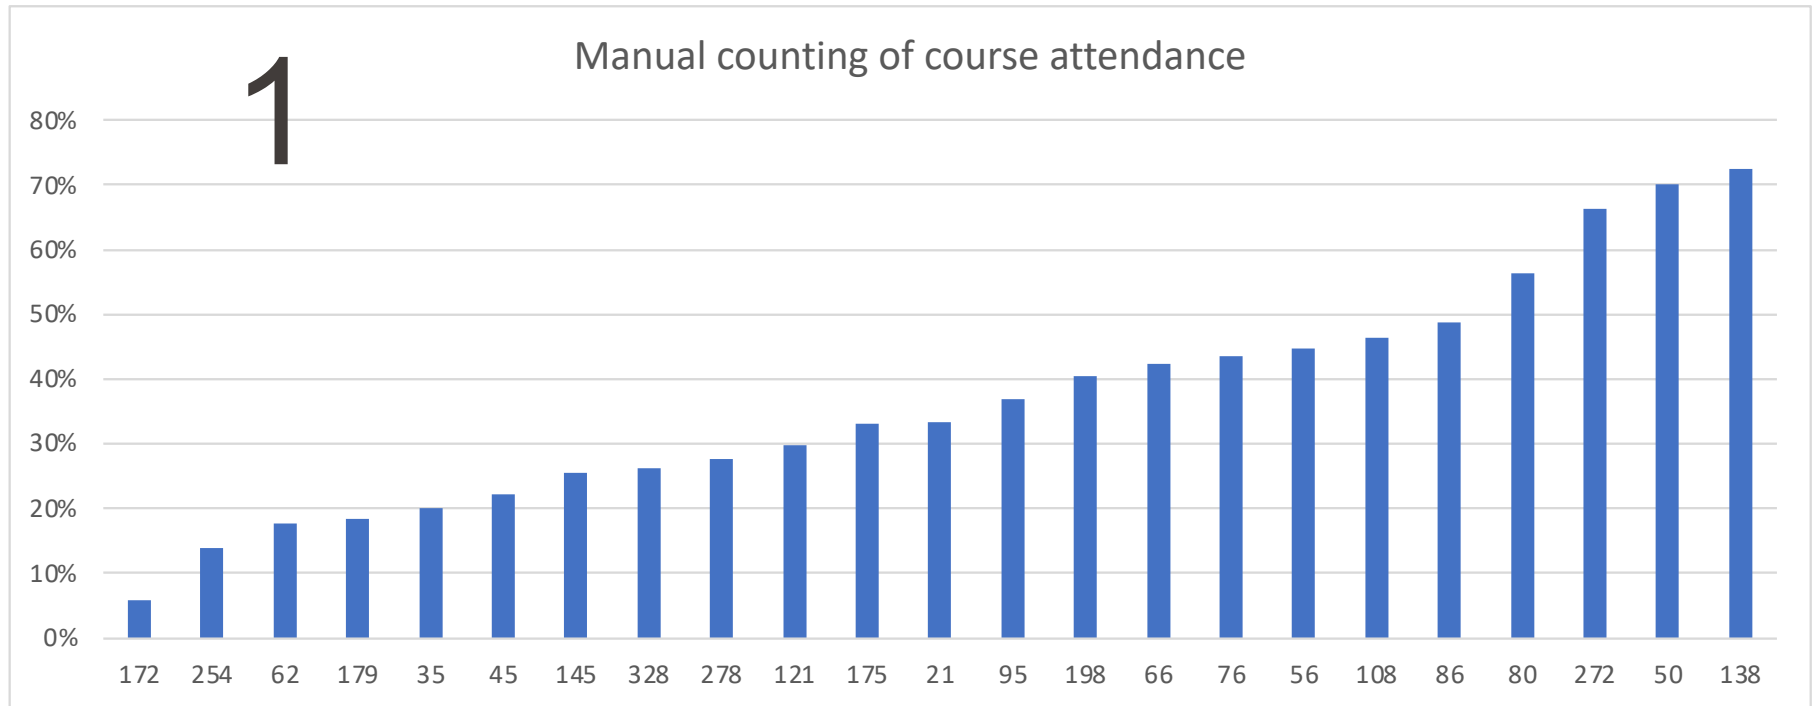

Mars 2022

Mai 2022

Last week, we asked students to enter into lecture rooms (not exercises or labs) and simply count the number of students. Vertically is the % of students present in class. The numbers at the bottom are the number of enrolled students in the course.

We have to treat data carefully as course attendance always decrease in the last weeks of the semester. We should redo it in beginning of October. In addition, some counting happened in the first 2 minutes of the lecture as if all students join on time.

This confirms the finding for SMT survey: different courses have different rates. No clear pattern emerges from looking at courses. **Our students hence seem to strategically select which courses they attend to.**

BTW, teachers also strategically select which courses they attend to. (2 came in presence at the last CDS)

Our students hence seem to strategically select which courses they attend to.

2

CAPE & LEARN will therefore run a survey mid-June to understand their decision processes.

Examples of questions

Quels étaient vos critères pour décider à quel cours assister

- J'ai privilégié les cours difficiles
- J'ai privilégié les cours avec un grand nombre de crédits (ou un haut coefficient)
- J'ai privilégié les cours que je trouve intéressants
- J'ai privilégié les cours que je trouve importants pour mes études ou ma carrière
- J'ai privilégié les cours auxquels mes amies ou amis assistaient
- J'ai évité les cours trop tôt ou trop tard
- C'était assez aléatoire
- Autre :...

Comment restez-vous à jour dans les cours auxquels vous n'assistez pas :

- Je les regarde en direct sur zoom
- Je regarde les enregistrements vidéos chaque semaine
- Je regarde les enregistrements vidéos quand j'ai le temps
- Je regarderai les enregistrements vidéos avant les examens
- Je me contente des notes d'autres étudiant.es
- Je me débrouille de diverses manières
- Autre :...

SwitchTube analytics are not very precise

But the number of on-campus connections in the current semester (last hill on the right) is ... the number of on-campus connections BEFORE the pandemic (first hill on the left)

Hence it seems they come on campus anyway but not necessarily in lectures but for projects, teams,....
Other universities made the same observation

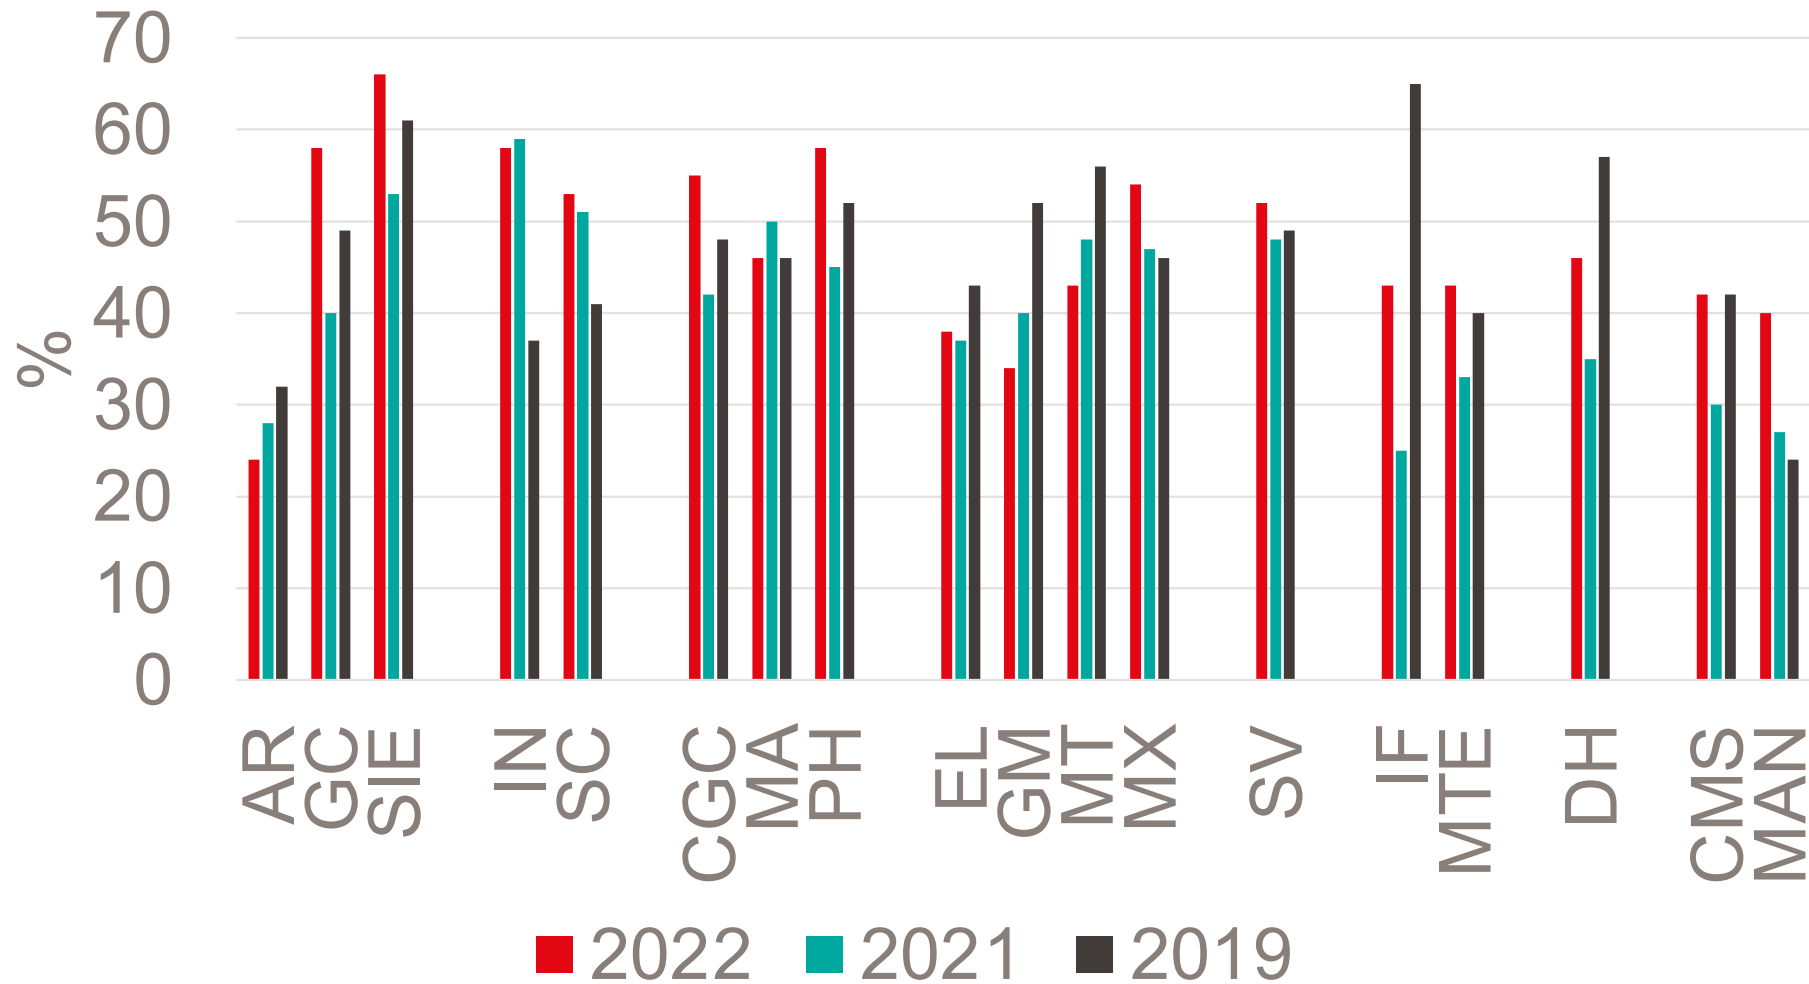

Details:

- The graph includes staff and students
- One unit is 1 device connected on campus on that day, whether for 1 second or multiples time
- VPN connection are not IN
- One person with 2 connected devices is 2 units

Response rate at the indicative student evaluation.

Huge discrepancies between sections (SIE the highest and SAR the lowest belong to the same school)

We hope to increase the rate by making this feedback soon enough to benefit to the students themselves

SOFTWARE ASSET MANAGEMENT

What is this ?

Purpose: To collect details on EPFL computers - not phones/tablets.

- Security
 - Ability to detect security breach
- Compliance
 - Global license agreements, audits
- Cost
 - Minimize license budgets by global agreements

Project initiated in 2020 with steering committee, input from deans and faculty members –decision on solution medio '22

Review of Lex for mobil phones has just been initiated with working group – a SAM may be chosen here as well

What does it do ?

Key facts

- It can not be used for activity monitoring, eg
 - Frequency, length, data use etc are not assessed.
- Privacy by design, minimized data processing –
 - User name, account, domain
 - Hardware details and OS
 - Software details (name, version)
 - Software use – last use

It is the digital equivalent of a physical equipment inventory
