

List of major changes

1. Non-sharp/sharp materials (rags, gowns, gloves, etc.) contaminated with traces of chemicals:

- OMoD code change: **Old code: 15 01 10** ⇒ **New code: 15 02 02.**

2. Empty packaging (contaminated with traces of chemicals):

- **No recycling** ⇒ All empty containers that have contained chemicals (glass bottle, plastic and metal containers) must be returned to the collection centers
- **The label "Clean container" will no longer be used.**

3. Sharp objects, small glass objects:

- **All sharp/sharp objects** shall be disposed of with **OMoD code 18 01 01.**
- These are mostly needles and pipette tips.
- No more distinction between contaminated and non-contaminated.
- Use only yellow containers (no white buckets).

4. Mixing of aqueous solutions from molecular biology/biochemistry:

- **New OMoD code 06 03 14.**
- Mixtures of saline solutions, buffers, nucleic acid extraction kits, ELISA rinses, etc. may be grouped in the same container.
- A new label has been created for this code.

Ajouter pictogrammes en fonction des dangers connus Add pictograms according to hazards		Déchets spéciaux Sonderabfälle Rifiuti speciali Code OMoD : 06 03 14
Groupe:	Solutions tampon/Buffer solutions SANS métaux lourds et cyanures/WITHOUT heavy metals and cyanides 3 < pH < 10	
Nom:	Solutions tampons provenant des analyses biomoléculaires et biochimiques Buffer solutions from biomolecular and biochemistry analysis (running buffers, washing solutions, extraction kits, etc.) Solvant: Eau/ water	
Date:	pH=	

Examples and case studies will be presented during the ZOOM meetings scheduled for early January 2022.

Question and answer sessions will follow these presentations.
