OFFICIAL COMMUNICATION

Procedure for Glovebox Regeneration in Sion

The following procedure _MUST_ be respected every time a research unit wants to perform a regeneration!

1. Inform the technical team that you would like to perform a regeneration of your glovebox (refer to page 2 for contact details).
2. The technical team must verify, and if needed improve, the connections from the glovebox to the building ventilation system.
3. Together with the technical team, select a date for the regeneration.

_Important information_

- It is _FORBIDDEN_ to conduct a regeneration during _weekends_ (from 5pm on Fridays) or during _public holidays_ (from 5pm on the eve of the public holidays).
- Use _FORMIER_ gas containing _5 % H2 MAXIMUM_.
- The document _GLOVEBOX MANDATORY ASPECTS AND BEST PRACTICES_¹ provides a lot of useful information on how to use and maintain your glovebox.

If you have any question, please open a _Support ticket_ (select category _Glovebox_).

---

¹ The document is available on the OHS website - [go.epfl.ch/glovebox](go.epfl.ch/glovebox).
