

Master of Science in ENERGY SCIENCE AND TECHNOLOGY

2-year program - 120 ECTS

Students must choose 22 ECTS of optional courses in one of these three orientations:

- A Energy conversion devices
- B Energy systems
- C Energy management and sustainability

Orientation	A	B	C	21
Advanced control systems		B		3
Advanced energetics		B		5
Advanced lab in electrical energy systems	A	B		4
Applied data analysis	A	B	C	8
Development engineering			C	4
Distributed intelligent systems			C	5
Electromagnetic compatibility	A			4
Energy storage systems	A			3
Energy and comfort in buildings		B		5
Engines and fuel cells	A			4
Environmental transport phenomena	A			5
Hydropower schemes and pumped-storage	A			4
Industrial automation	A			3
Industrial electronics II	A			4
Material flow analysis and resource management			C	4
Model predictive control	A	B		4
Modelling and optimization of energy systems		B		4
Power system restructuring and deregulation			C	3
Renewable energy (for ME)		B		4
Sanitary engineering for development			C	3
Semiconductor devices I	A			4
Smart grids technologies	A	B	C	5
Solar energy conversion	A			4
Sustainability assessment of urban systems			C	3
Water and wastewater treatment			C	5

Entry requirements

Candidates should have a Bachelor's degree from a reputable university and excellent academic performance. The strong interdisciplinary character of the Master's degree in Energy Science and Technology is reflected in the fact that the program is open to a wide range of Bachelor's degree holders in applied sciences and engineering, including but not limited to electrical, mechanical, environmental sciences and engineering.

	Credits
Common core courses	24
Convex optimization	5
Electrochemistry for materials technology	3
Energy conversion and renewable energy	4
Energy supply, economics and transition	2
Fundamentals and processes for photovoltaic devices	3
Heat pump systems	3
Hydraulic turbomachines	4

Complement	20
-------------------	-----------

Students must follow levelling courses depending on their background and choose additional optional core courses to reach 20 ECTS.

EE/MT: students with background in Electrical Engineering or Microengineering
ME: students with background in Mechanical Engineering
SIE: students with background in Environmental Science and Engineering

Additional mandatory courses for EE/MT:	7
Heat and mass transfer	4
Life cycle assessment in energy systems	3

Additional mandatory courses for ME:	10
Fundamentals of electrical circuits and systems I	2
Life cycle assessment in energy systems	3
Power systems analysis	5

Additional mandatory courses for SIE:	13
Fundamentals of electrical circuits and systems I, II	4
Heat and mass transfer	4
Power systems analysis	5

Additional mandatory courses for students from another study program:	16
Fundamentals of electrical circuits and systems I, II	4
Heat and mass transfer	4
Life cycle assessment in energy systems	3
Power systems analysis	5

Optional core courses	A	B	C	4 to 13
Advanced heat transfer				3
Air pollution			C	5
Discrete optimization				5
Energy systems engineering				3
Fundamentals of electrical circuits and systems I, II				4
Heat and mass transfer				4
Hydroacoustic for hydropower plants				3
Hydropower plants: generating and pumping units				2
Industrial electronics I	A			4
Life cycle assessment in energy systems				3
Lifecycle performance of product systems				3
Liquid-gas interfacial heat and mass transfer				3
Machine learning I				4
Negotiation techniques				2
Nuclear fusion and plasma physics				4
Power systems analysis				5
Principles of finance				5
Principles of microeconomics				4
Solid waste engineering				4
Thermodynamics of energy conversion and storage				3
Water resources engineering				5

Industrial internship

The program includes a compulsory industrial internship with a minimal duration of 8 weeks.
