

**Abridged version:**

2-3 positions in <https://leago.epfl.ch/> on projects underpinning: **(i) (ii); (iii)** advancing spatial & functional omics techniques in multiple living models.

**Longer version (should space permit)**

We have several PhD positions opening in the [Aye laboratory](#) in Swiss Federal Institute of Technology Lausanne (EPFL), Switzerland, on projects funded by European Research Council (ERC via SERI), Swiss National Science Foundation, Swiss Cancer League, and collaborating pharma industries. Our laboratory is a multidisciplinary laboratory focusing on reactive small-molecule metabolite signaling and genome regulation, as it pertains to intra- and intercellular communication often conserved across evolution, and also to drug discovery. We have pioneered numerous novel and multi-award-winning concepts and techniques that have been applied to important biological questions.
