

PatentGem

Making innovation safer for Tech Firms

In a nutshell

A radically new way to detect potential patent infringements and associated commercial products.

Why is our technology important?

Uses information outside patent databases and combines it with state-of-the-art Large Language Models to help patent portfolio owners to keep their innovations safe from infringements as well as prevent their product portfolio from inadvertently infringing on other patents.

The benefits of our solution

- Enhances freedom to operate search and infringement detection.
- Harnessing public and private information outside of patent databases.
- Points to products infringing on the patent in addition to the patent itself.
