

AutoMate

Making lab automation accessible to everyone

In a nutshell

AutoMate is a pioneering start-up in the Lab-Automation market, dedicated to helping researchers and technicians from repetitive, time-consuming tasks.

Why is our technology important?

Solving the energy crisis problem and fronting new pandemics requires laboratories to work at an ever-increasing speed and efficiency. We need to adopt automated solutions that empower laboratories to work many times faster.

Although robotic solutions for these tasks exist, they hardly ever are cost-effective and require specialized engineers for deployment. This limits the adoption of robotic solutions in the lab environment; we are developing a cost-effective, user-friendly solution that can automate several standard laboratory practices.

The benefits of our solution

- Cost-effective
- Accessible and usable by researchers with limited experience in robotics

Keywords

Laboratory Automation, Robotics
