letter #14

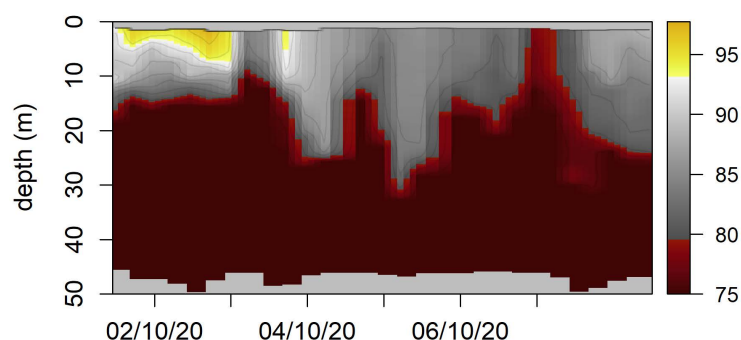

Temperature [°C]

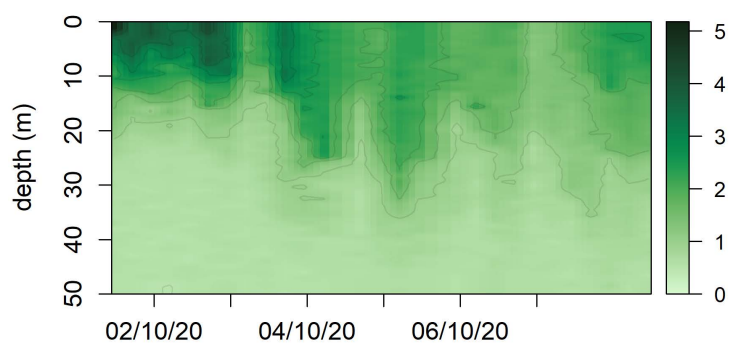

O2 [mg/L]

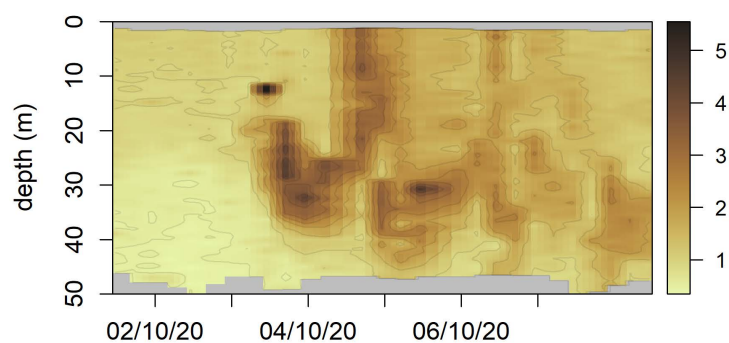

O2sat [%]

Chl.a [ug/L]

backscattering (700nm) [1.e-2/m/sr]

Dear Humans,

That looked like the end of Summer. Wind and cold air have considerably deepened the mixed layer, and rivers have brought a lot of matter. Not sure I'll see oversaturated O₂ again this year. For next week, I've been programmed to profile hourly for 24h. It's been said I may even see zooplankton swimming up and down... I'll have all my sensors wide open for that, I don't wanna miss it.

the Thetis.
