

A Highly Convergent Total Synthesis of Leustroducsin B

Trost, B. M.; Biannic, B.; Brindle, C. S.; O'Keefe, B. M.; Hunter, T. J.; Ngai, M.-Y. *J. Am. Chem. Soc.* **2015**, 137, 11594

- Isolated from a culture broth of soil bacterium *Streptomyces Platensis* in 1993
- Antibacterial, antifungal, antitumor activity:
 - * Inhibition of protein serine/threonine phosphatase 2A (which regulates cell growth and inhibits metastasis)
 - * Produces increased *in vivo* resistance to *E. coli* infections.

Shortest prior total synthesis: 37 linear and 64 total steps!!

Exercise 1: General strategy. Think like Trost! Identify the two main disconnections, which leads to fragments **2, 3, 4**.
 (Hint: reason broadly and not stepwise - there are 9 steps between 1 and 2, 3, 4)

2

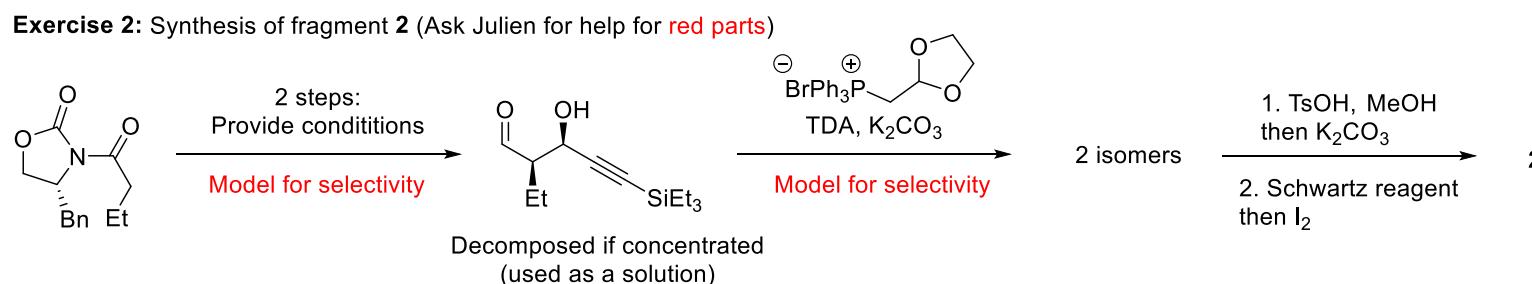

3

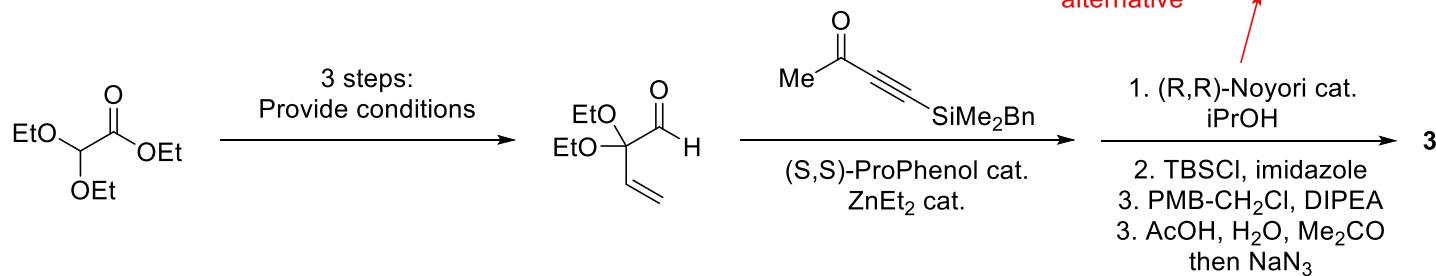

4

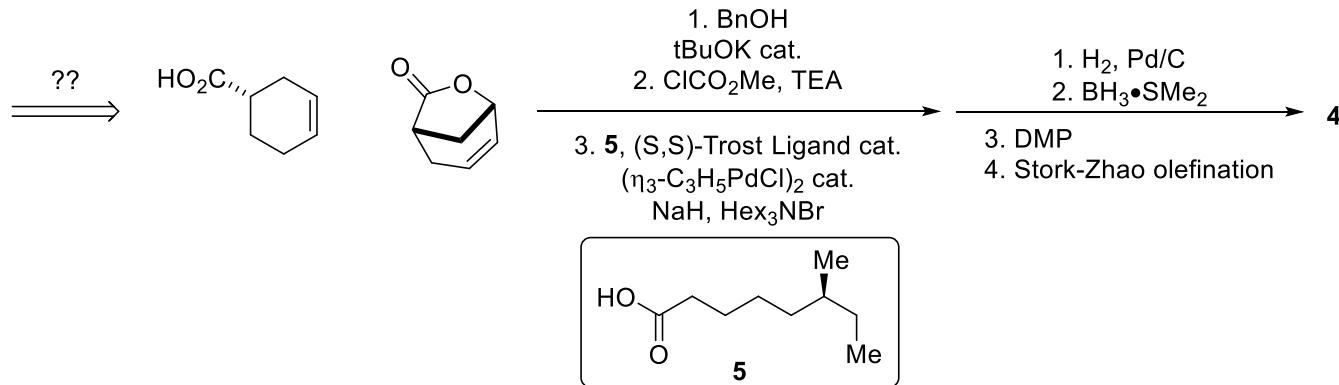

Exercise 2: Synthesis of fragment **2** (Ask Julien for help for red parts)

Exercise 3: Synthesis of fragment 3 (Ask Julien for help for red parts)

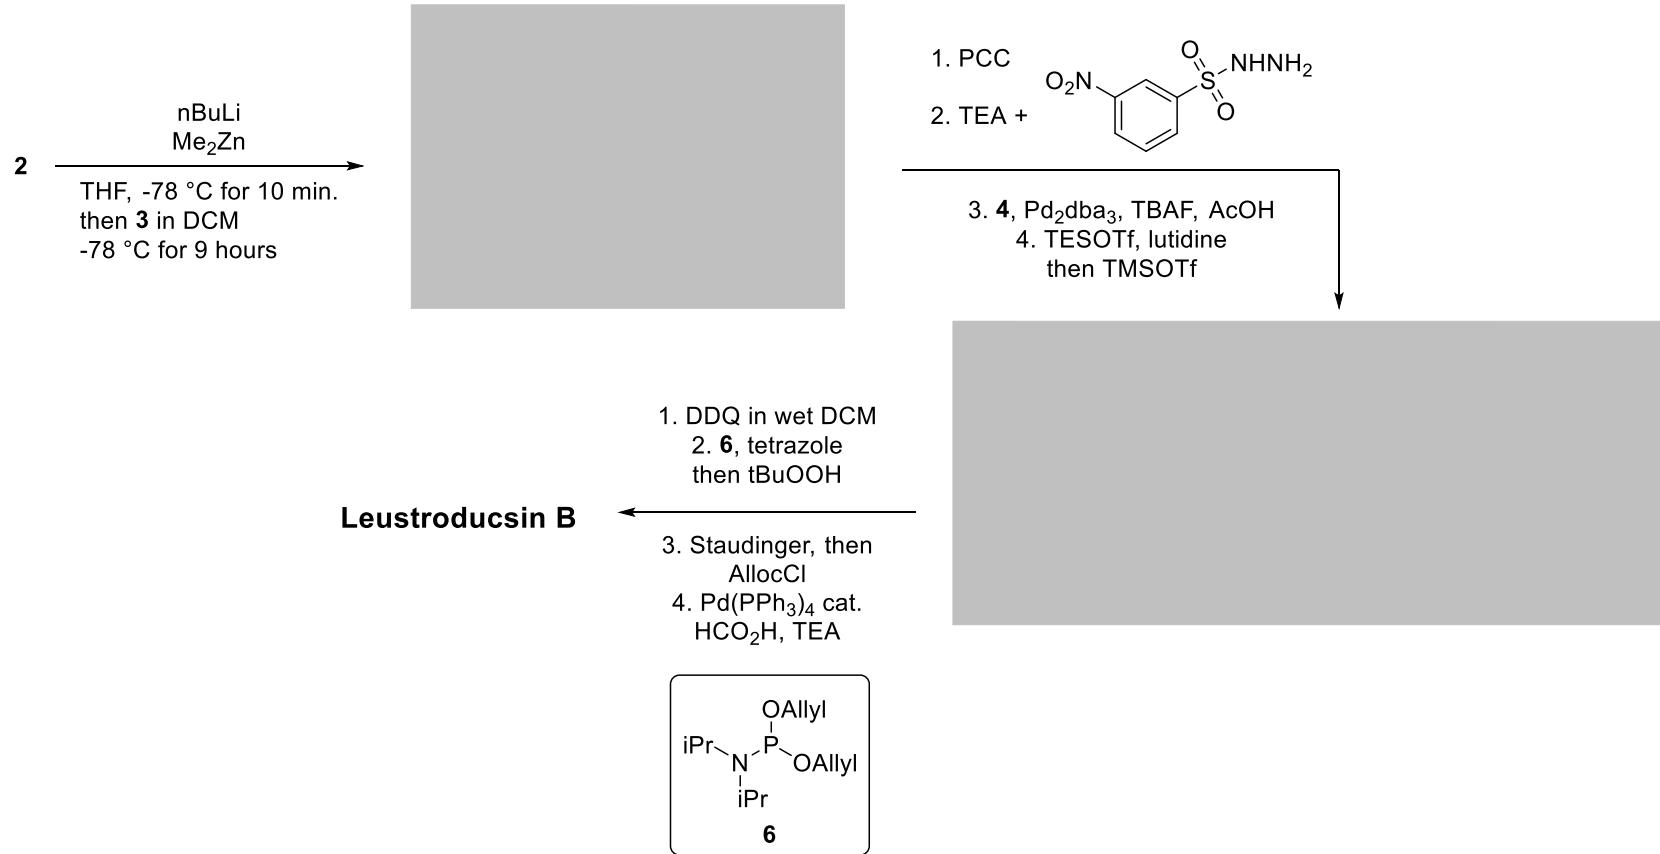

Exercise 4: Synthesis of fragment 4

Exercises 5, 6, 7 (based on the remaining time)

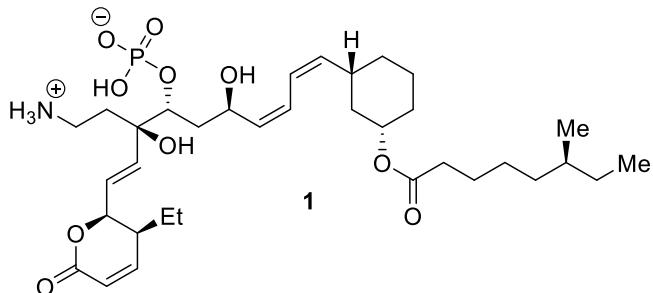

Propose a synthetic route for **5**

SOLUTION

A Highly Convergent Total Synthesis of Leustroducsin B

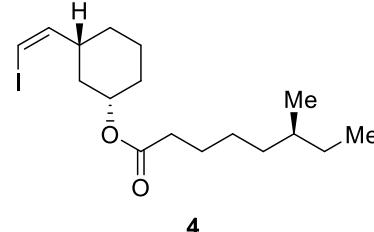

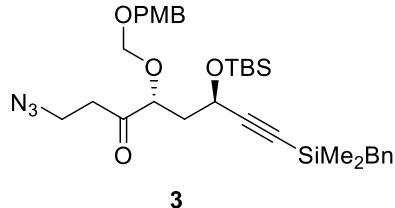

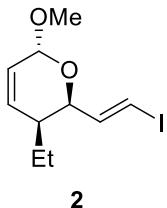

Trost, B. M.; Biannic, B.; Brindle, C. S.; O'Keefe, B. M.; Hunter, T. J.; Ngai, M.-Y. *J. Am. Chem. Soc.* **2015**, *137*, 11594

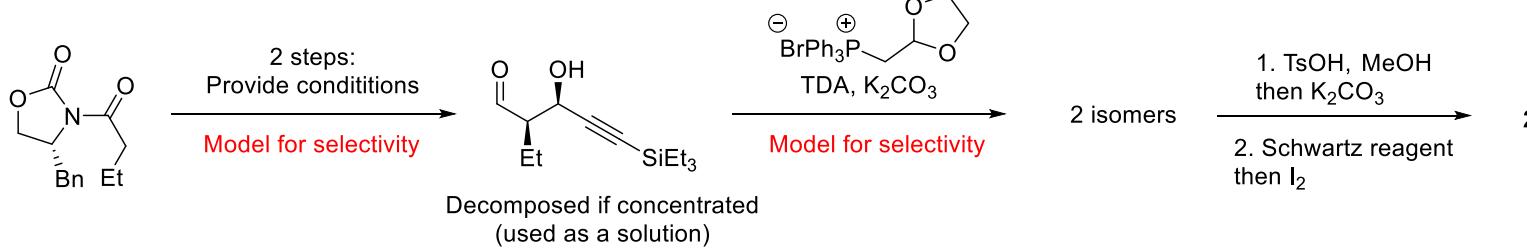

- Isolated from a culture broth of soil bacterium *Streptomyces Platensis* in 1993
- Antibacterial, antifungal, antitumor activity:
- * Inhibition of protein serine/threonine phosphatase 2A (which regulates cell growth and inhibits metastasis)
- * Produces increased *in vivo* resistance to *E. coli* infections.

Shortest prior total synthesis: 37 linear and 64 total steps!!

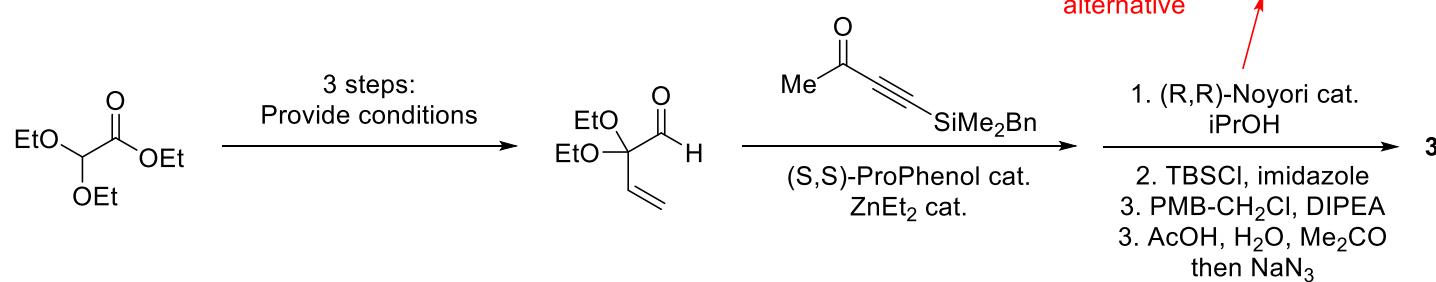

Exercise 1: General strategy. Think like Trost! Identify the two main disconnections, which leads to fragments **2, 3, 4**.
(Hint: reason broadly and not stepwise - there are 9 steps between 1 and 2, 3, 4)

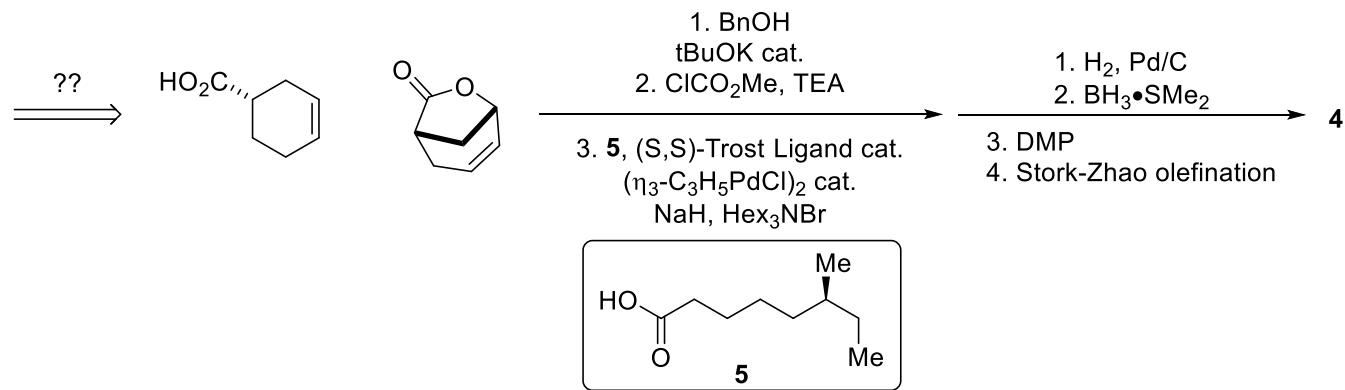

Exercise 2: Synthesis of fragment 2 (Ask Julien for help for red parts)

Exercise 3: Synthesis of fragment 3 (Ask Julien for help for red parts)

Exercise 4: Synthesis of fragment 4

Exercises 5, 6, 7 (based on the remaining time)

Propose a synthetic route for **5**
