ENGINES OF DISCOVERY

A Century of Particle Accelerators

"The real voyage of discovery consists not in seeking new landscapes but in having new eyes"

Marcel Proust

(Le véritable voyage de découverte ne consiste pas à chercher de nouveaux paysages, mais à avoir de nouveaux yeux)

Andrew Sessler · Edmund Wilson

25 Nobel Prizes in Physics that had direct contribution from accelerators

| Year | Name | Accelerator-Science Contribution to Nobel Prize- |
|------|-----------------------------|--|
| | | Winning Research |
| 1939 | Ernest O. Lawrence | Lawrence invented the cyclotron at the University of Californian at Berkeley in 1929 [12]. |
| 1951 | John D. Cockcroft and | Cockcroft and Walton invented their eponymous linear |
| | Ernest T.S. Walton | positive-ion accelerator at the Cavendish Laboratory in |
| | | Cambridge, England, in 1932 [13]. |
| 1952 | Felix Bloch | Bloch used a cyclotron at the Crocker Radiation |
| | | Laboratory at the University of California at Berkeley |
| | | in his discovery of the magnetic moment of the neutron |
| | | in 1940 [14]. |
| 1957 | Tsung-Dao Lee and Chen Ning | Lee and Yang analyzed data on K mesons (θ and τ) |
| | Yang | from Bevatron experiments at the Lawrence Radiation |
| | | Laboratory in 1955 [15], which supported their idea in |
| | | 1956 that parity is not conserved in weak interactions |
| | | [16]. |
| 1959 | Emilio G. Segrè and | Segrè and Chamberlain discovered the antiproton in |
| | Owen Chamberlain | 1955 using the Bevatron at the Lawrence Radiation |
| | | Laboratory [17]. |
| 1960 | Donald A. Glaser | Glaser tested his first experimental six-inch bubble |
| | | chamber in 1955 with high-energy protons produced by |
| 1071 | D. L H. C L. | the Brookhaven Cosmotron [18]. |
| 1961 | Robert Hofstadter | Hofstadter carried out electron-scattering experiments |
| | | on carbon-12 and oxygen-16 in 1959 using the SLAC |
| | | linac and thereby made discoveries on the structure of |
| 1963 | Maria Goeppert Mayer | nucleons [19]. Goeppert Mayer analyzed experiments using neutron |
| 1903 | Maria Goeppert Mayer | beams produced by the University of Chicago |
| | | cyclotron in 1947 to measure the nuclear binding |
| | | energies of krypton and xenon [20], which led to her |
| | | discoveries on high magic numbers in 1948 [21]. |
| 1967 | Hans A. Bethe | Bethe analyzed nuclear reactions involving accelerated |
| 1701 | Tano II. Benie | protons and other nuclei whereby he discovered in |
| | | 1939 how energy is produced in stars [22]. |
| 1968 | Luis W. Alvarez | Alvarez discovered a large number of resonance states |
| 1700 | | using his fifteen-inch hydrogen bubble chamber and |
| | | high-energy proton beams from the Bevatron at the |
| | | Lawrence Radiation Laboratory [23]. |
| 1976 | Burton Richter and | Richter discovered the J/Ψ particle in 1974 using the |
| | Samuel C.C. Ting | SPEAR collider at Stanford [24], and Ting discovered |
| | _ | the J/Y particle independently in 1974 using the |
| | | Brookhaven Alternating Gradient Synchrotron [25]. |
| 1979 | Sheldon L. Glashow, | Glashow, Salam, and Weinberg cited experiments on |
| | Abdus Salam, and | the bombardment of nuclei with neutrinos at CERN in |
| | Steven Weinberg | 1973 [26] as confirmation of their prediction of weak |
| | | neutral currents [27]. |

| 1980 | James W. Cronin and | Cronin and Fitch concluded in 1964 that CP (charge- |
|------|--------------------------------|--|
| 1900 | Val L. Fitch | parity) symmetry is violated in the decay of neutral K |
| | Vai L. Pitch | mesons based upon their experiments using the |
| | | Brookhaven Alternating Gradient Synchrotron [28]. |
| 1981 | Wai M. Ciarlaha | |
| 1981 | Kai M. Siegbahn | Siegbahn invented a weak-focusing principle for |
| | | betatrons in 1944 with which he made significant |
| | | improvements in high-resolution electron spectroscopy |
| 1002 | W | [29]. |
| 1983 | William A. Fowler | Fowler collaborated on and analyzed accelerator-based |
| | | experiments in 1958 [30], which he used to support his |
| | | hypothesis on stellar-fusion processes in 1957 [31]. |
| 1984 | Carlo Rubbia and | Rubbia led a team of physicists who observed the |
| | Simon van der Meer | intermediate vector bosons W and Z in 1983 using |
| | | CERN's proton-antiproton collider [32], and van der |
| | | Meer developed much of the instrumentation needed |
| | | for these experiments [33]. |
| 1986 | Ernst Ruska | Ruska built the first electron microscope in 1933 based |
| | | upon a magnetic optical system that provided large |
| | | magnification [34]. |
| 1988 | Leon M. Lederman, | Lederman, Schwartz, and Steinberger discovered the |
| | Melvin Schwartz, and | muon neutrino in 1962 using Brookhaven's Alternating |
| | Jack Steinberger | Gradient Synchrotron [35]. |
| 1989 | Wolfgang Paul | Paul's idea in the early 1950s of building ion traps |
| | | grew out of accelerator physics [36]. |
| 1990 | Jerome I. Friedman, | Friedman, Kendall, and Taylor's experiments in 1974 |
| | Henry W. Kendall, and | on deep inelastic scattering of electrons on protons and |
| | Richard E. Taylor | bound neutrons used the SLAC linac [37]. |
| 1992 | Georges Charpak | Charpak's development of multiwire proportional |
| | | chambers in 1970 were made possible by accelerator- |
| | | based testing at CERN [38]. |
| 1995 | Martin L. Perl | Perl discovered the tau lepton in 1975 using Stanford's |
| | | SPEAR collider [39]. |
| 2004 | David J. Gross, Frank Wilczek, | Gross, Wilczek, and Politzer discovered asymptotic |
| 2001 | and | freedom in the theory of strong interactions in 1973 |
| | H. David Politzer | based upon results from the SLAC linac on electron- |
| | | proton scattering [40]. |
| 2008 | Makoto Kobayashi and | Kobayashi and Maskawa's theory of quark mixing in |
| 2000 | Toshihide Maskawa | 1973 was confirmed by results from the KEKB |
| | | accelerator at KEK (High Energy Accelerator Research |
| | and Yoichro Nambu | Organization) in Tsukuba, Ibaraki Prefecture, Japan, |
| | | and the PEP II (Positron Electron Project II) at SLAC |
| | | [41], which showed that quark mixing in the six-quark |
| | | model is the dominant source of broken symmetry [42]. |
| L | | model is the dominant source of broken symmetry [42]. |

2013: François Englert and Peter W. Higgs "for the theoretical discovery of a mechanism that contributes to our understanding of the origin of mass of subatomic particles, and which recently was confirmed through the discovery of the predicted fundamental particle, by the ATLAS and CMS experiments at **CERN's Large Hadron Collider**"

20 Nobels with X-rays

Chemistry

- 1936: Peter Debye
- 1962: Max Perutz and Sir John Kendrew
- 1976 William Lipscomb
- 1985 Herbert Hauptman and Jerome Karle
- 1988 Johann Deisenhofer, Robert Huber and Hartmut Michel
- 1997 Paul D. Boyer and John E. Walker
- 2003 Peter Agre and Roderick Mackinnon
- 2006 Roger D. Kornberg
- 2009 V. Ramakrishnan, Th. A. Steitz, A. E. Yonath
- 2012 Robert J. Lefkowitz and Brian K. Kobilka

Physics

- 1901 Wilhelm Rontgen
- 1914 Max von Laue
- 1915 Sir William Bragg and son
- 1917 Charles Barkla
- 1924 Karl Siegbahn
- 1927 Arthur Compton
- 1981 Kai Siegbahn

Medicine

- 1946 Hermann Muller
- 1962 Frances Crick, James Watson and Maurice Wilkins
- 1979 Alan Cormack and Godfrey Hounsfield
