

Health report of the Conventional Facility

Global health report of the entire area on page 2 followed by health reports per room.

Since 2019, sanitary monitoring is performed by two different methods:

- Analyse on EAD filters placed in Air Handling Units and collecting dust from IVC each quarter;
- Analyse of sentinel mice on dirty bedding each semester.

The analysis laboratories used are Charles River, QM diagnostics or Idexx.

Entire facility health report

Zone: CONV

Specie: Mouse

Date of Issue:

Numbers of cages: 1800

13-Dec-23

Numbers of cages of sentinels: 19
