

PROBLEM 5.

- (a) Let  $X$  and  $Y$  be two continuous real-valued random variables with joint probability density function  $f_{X,Y}$ . Show that if  $X$  and  $Y$  are independent, they are also *uncorrelated*.
- (b) Consider two independent and uniformly distributed random variables  $U \in \{0, 1\}$  and  $V \in \{0, 1\}$ . Assume that  $X$  and  $Y$  are defined as follows:  $X = U + V$  and  $Y = |U - V|$ . Are  $X$  and  $Y$  independent? Compute the covariance of  $X$  and  $Y$ . What do you conclude?

PROBLEM 6. Assume you pick a point on the surface of the unit sphere (i.e. the sphere centered at the origin with radius 1) uniformly at random and  $(X, Y, Z)$  denotes its coordinates (in 3D space). Compute  $\mathbb{E}[X^2]$ .

PROBLEM 7. Assume the random variable  $X$  has an exponential distribution given by  $f_X(x) = e^{-x}$  when  $x \geq 0$ . Similarly,  $\hat{X}$  is exponentially distributed with  $f_{\hat{X}}(\hat{x}) = 2e^{-2\hat{x}}$  for  $\hat{x} \geq 0$ .

- (a) For what values of  $x$  do we have  $f_X(x) \leq f_{\hat{X}}(x)$ ?
- (b) Calculate  $\mathbb{P}(f_X(X) \leq f_{\hat{X}}(X))$ .
- (c) Calculate  $\mathbb{P}(f_X(\hat{X}) \geq f_{\hat{X}}(\hat{X}))$ .
